[57] **ABSTRACT**

An apparatus and method for injecting and volatilizing a volatile drug in a patient simulator, including a manikin, a gas supply and a drug volatilization device. The drug volatilization device includes a thermal conductor defining a gas propagation cavity, a sintered insert, and a needle accepting cavity. A simulated response to the drug is calculated, and an output device associated with the manikin is actuated to simulate the effect of the drug.
