

US006000396A

United States Patent [19]

[11] Patent Number: 6,000,396

Melker et al.

[45] Date of Patent: Dec. 14, 1999

[54] HYBRID MICROPROCESSOR CONTROLLED VENTILATOR UNIT

[75] Inventors: Richard J. Melker; Michael J. Banner; Samsun Lampotang, all of Gainesville; Paul B. Blanch, Alachua; Neil R. Euliano; Ronald G. Carovano, both of Gainesville, all of Fla.

[73] Assignee: University of Florida, Gainesville, Fla.

[21] Appl. No.: 08/516,478

[22] Filed: Aug. 17, 1995

[51] Int. Cl.⁶ A61M 16/00

[57] ABSTRACT

A method and apparatus for operating a ventilator in a primary electronic mode or in a back-up pneumatic mode during primary electronic mode failure. A method and apparatus for operating a ventilator in an advanced mode, having a number of ventilatory modes, or in a basic mode, having a limited number of ventilatory modes is also disclosed.
